# RESEARCH WITH GOOGLE MAPS

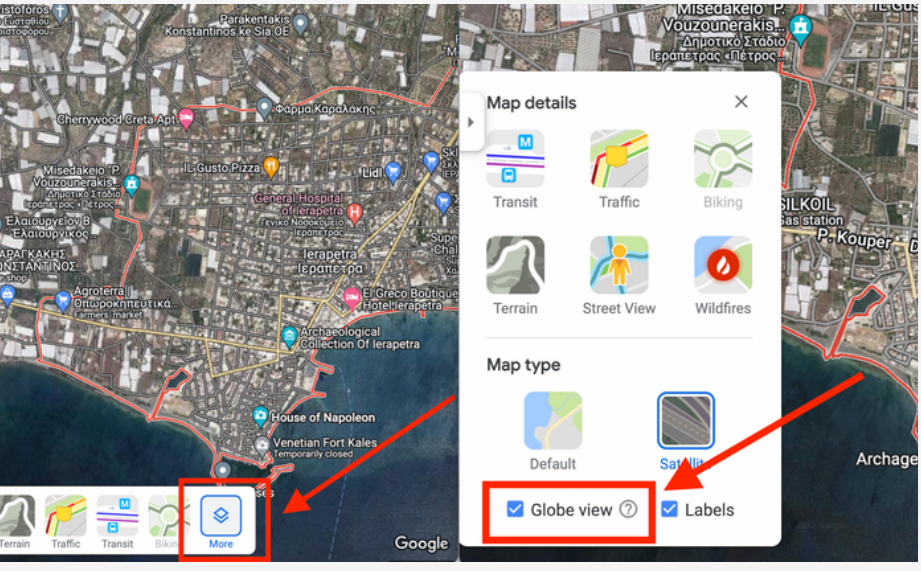

## 1. OPEN GOOGLE MAPS

Open the Google Maps home page (https://www.google.com/maps). There, enter the city or region you want to research.

## 2. USE SATELLITE IMAGES FOR ORIENTATION

It will save you a lot of time if you orient yourself roughly first. For example, by mountain ranges, the shape of the coast or other landmarks. This way you can quickly narrow down the region you are considering. To do so, click on the "Satellite" square at the left bottom.

## 3. ACITVATE GLOBE VIEW

The Globe View or 3D view gives you an even better overview of places. To activate it, again click the "Satellite" square at the left bottom, choose "More" and activate "Globe View".

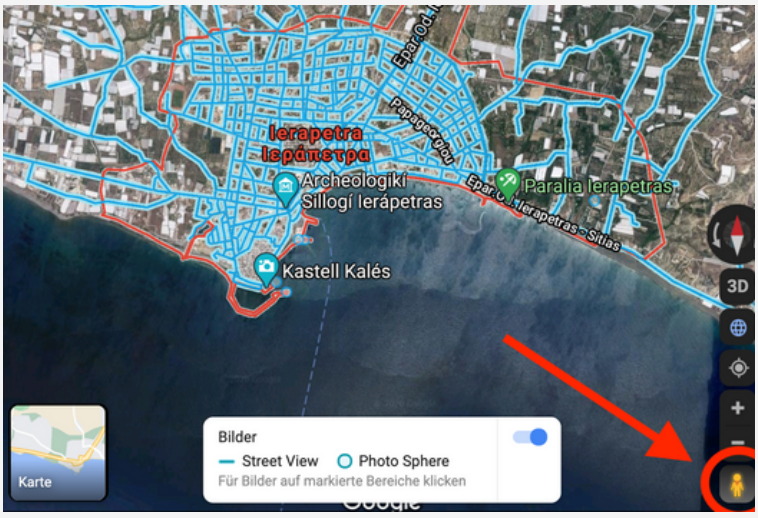

## 4. USE THE 3D VIEW

Now, click on the 3D icon on the right edge. The view will tilt a bit. If you press the Control key (Ctrl) and your mouse at the same time, and then drag the mouse up, the view tilts further. (On Apple devices, press "command" instead of "Ctrl").

## 5. CHANGE INTO 2D MODE

If you have oriented yourself, switch to the 2D view. To do this, click on the 2D symbol in the right margin.

## 6. USE STREET VIEW

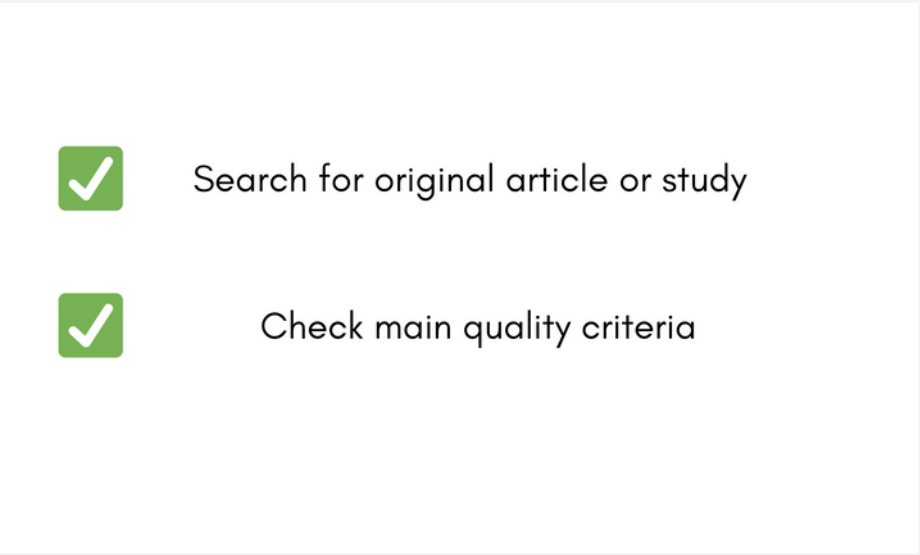

Next, it is usually helpful to continue searching on Street Level. To do this, click once on the yellow person icon at the bottom right edge. Blue markers will now appear on the map. Google Street View is available on these streets. Select one of the streets, drag the yellow figure to the location and release it at the corresponding point. Google will then automatically open the Street View for that location.

## 7. SITE VISIT

Now you have the possibility to move digitally through the streets of the corresponding place.

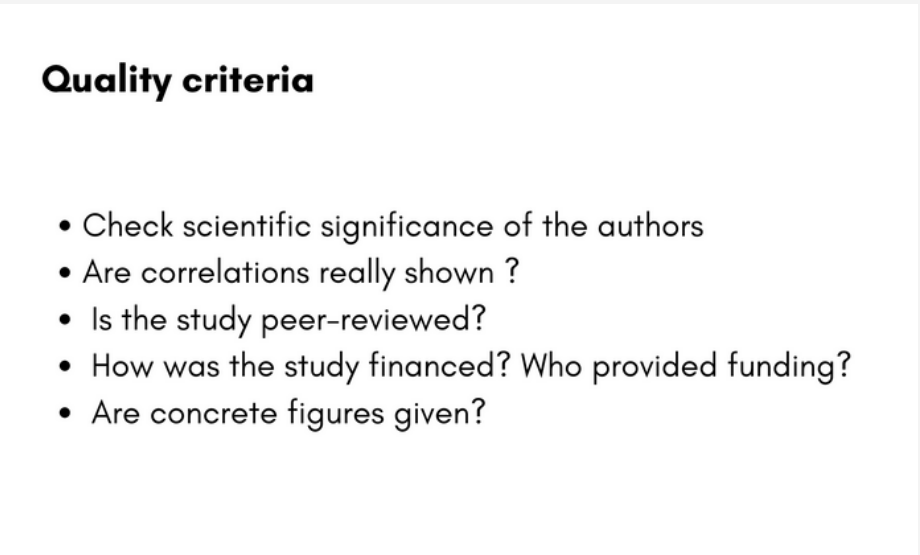

# FACT-CHECKING SCIENTIFIC REPORTS

## 1. USE DATABASES

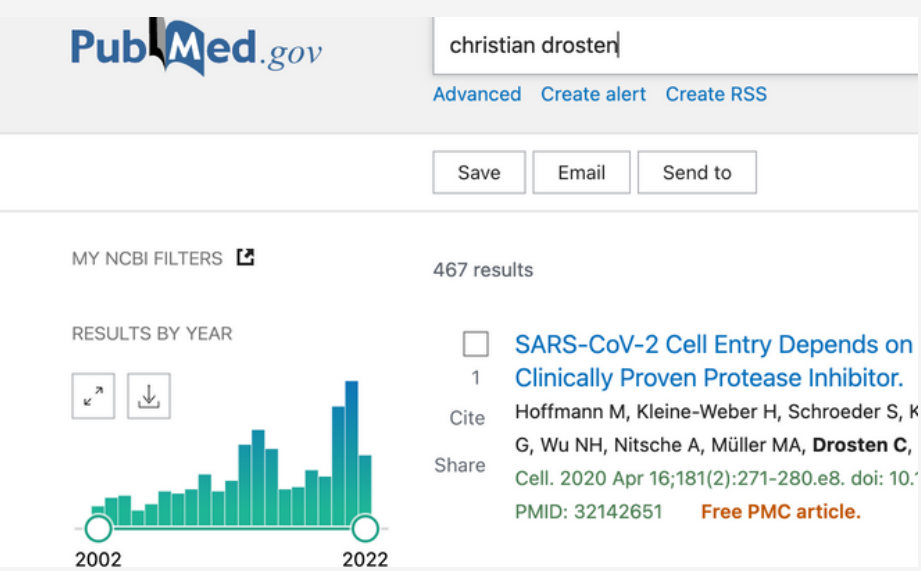

Publication databases
for studies and evaluation of experts

- https://pubmed.ncbi.nlm.nih.gov/
- https://sci-hub.se/

## 2. CHECK KEY CRITERIAS

Most importantly: the funding and the discussion part pf any publication

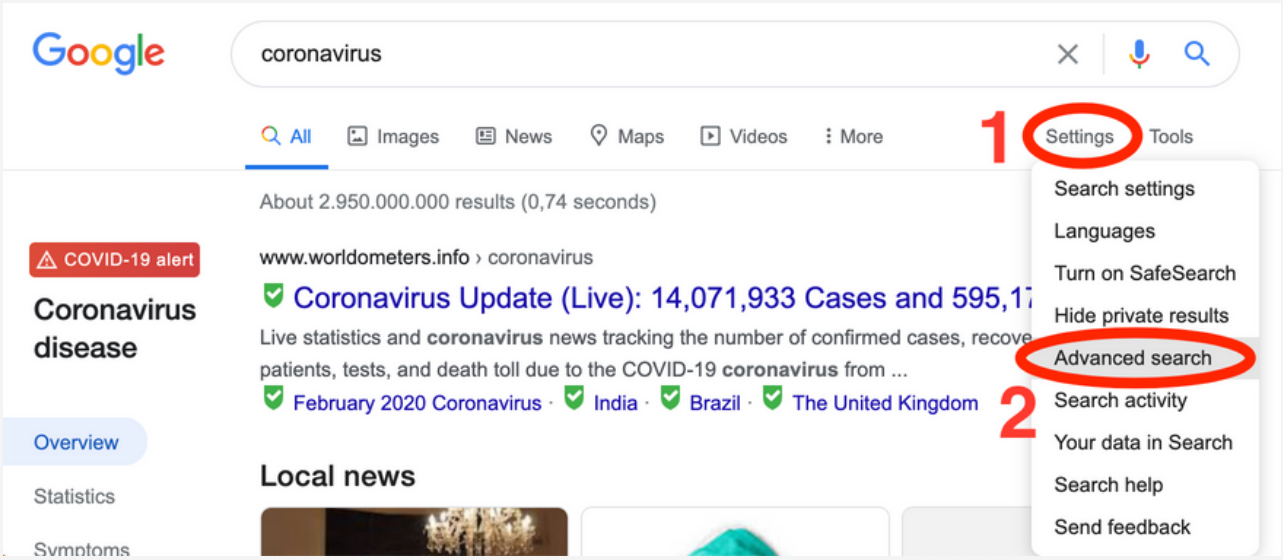

## 3. CHECK THE CONTEXT

The scientific significance, amount of publications and topics of authors can be checked in Pubmed for example.

# ADVANCED GOOGLE SEARCH

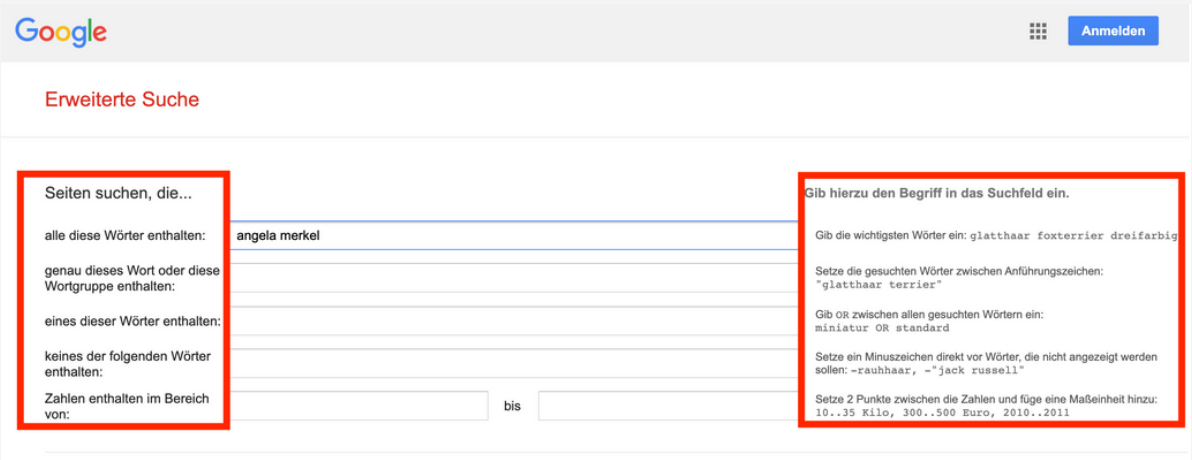

## 1. START

Searching for any keyword using Google, a variety of additional search settings appear on the Google page. Click "Settings" and then "Advanced search". Or directly visit: https://www.google.com/advanced_search

## 2. OPTIONS

Now an extensive search mask opens. On the left side you see possible filters. On the right side, the associated shortcuts are explained. These are the key commands that allow you to enter the search directly into the Google search box. If you use them, you will not have to take a detour via the menu in the future.

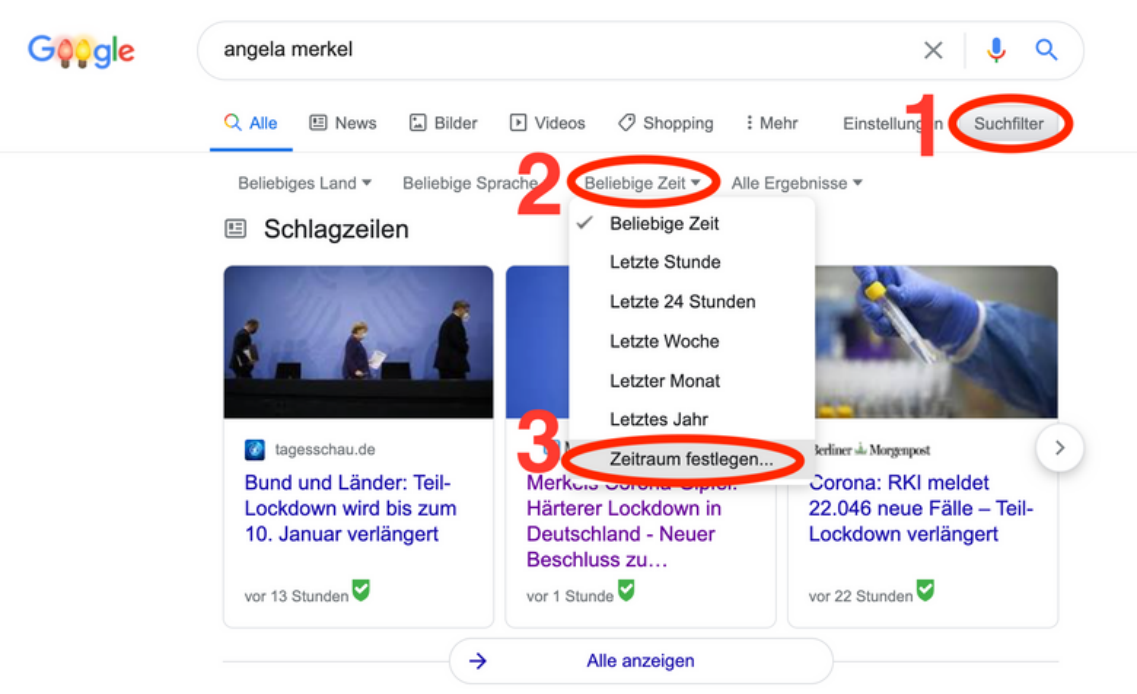

# 3. FILTER OPTIONS

For example, filtered searches for file types or on specific pages can lead to interesting results. Often, searching via Google advanced search and selecting "website or domain" is a more effective search than on the page itself.

# 4. MORE FILTEROPTIONS

You can also filter the search results by time period. To do this, search for any matching term and then click "Search Filter", "Any Time", "Set Period" and then "Go".

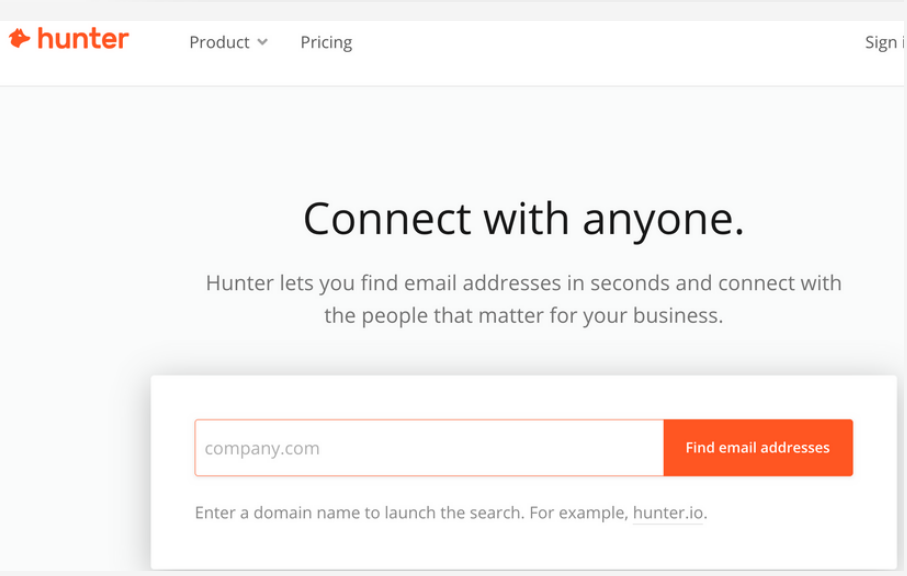

# ONLINE-RESEARCH

## 1. SEARCH CLAIM REVIEW DATABASE

Search the Google-Claim Review Project database. For example, with the search command: "list:recent".

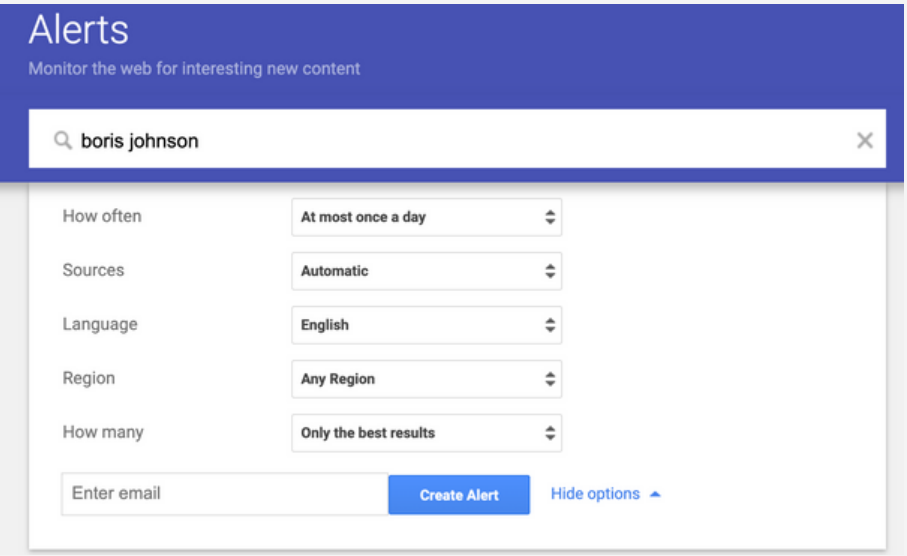

https://toolbox.google.com/factcheck/explorer/search/list:recent;hl=en

## 2. FIND EXPERTS

In addition to Google, LinkedIn, press inquiries and websites, the tool hunter.io can also help while searching for experts. The tool shows usual mail patterns of companies or institutions in the database.

https://hunter.io/

## 3. SET GOOGLE ALERTS

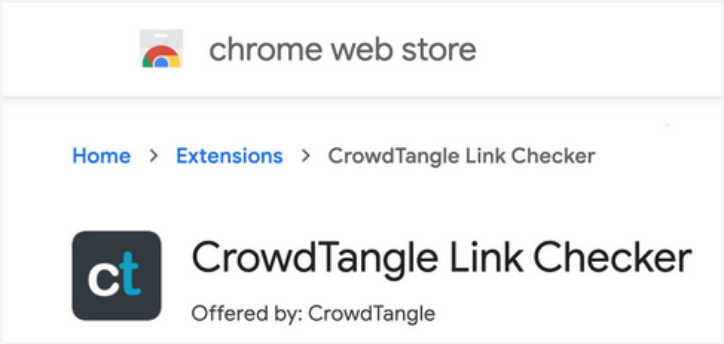

Set up Google Alerts on search topics or for your own name (for security).

https://www.google.de/alerts

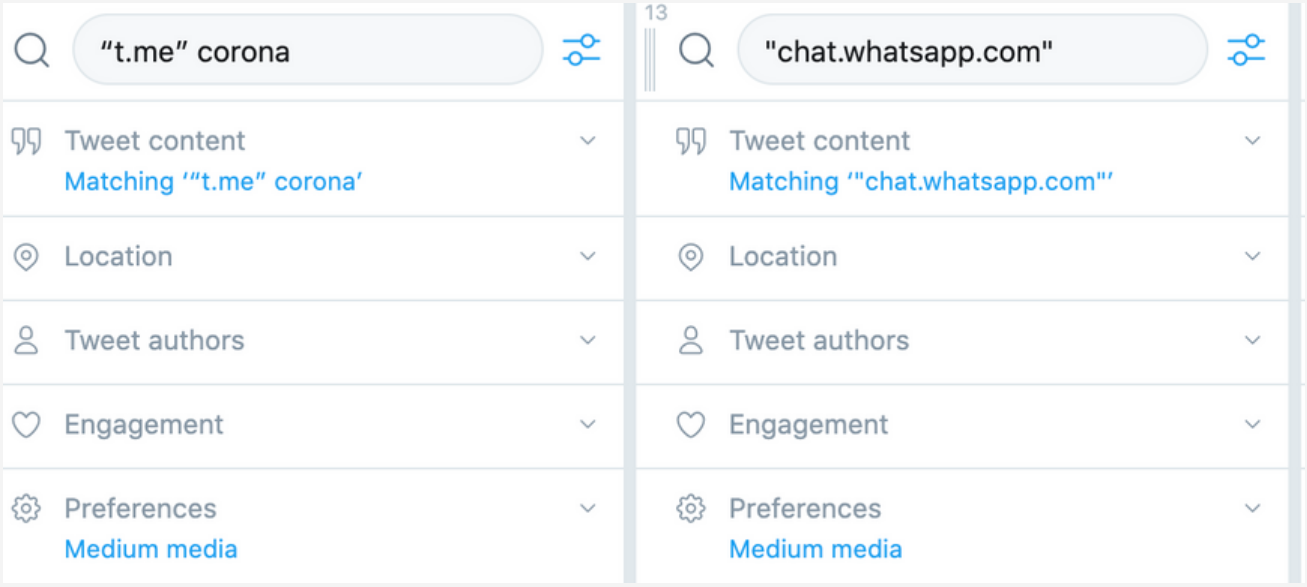

# 4. CROWDTANGLE LINK-CHECKER

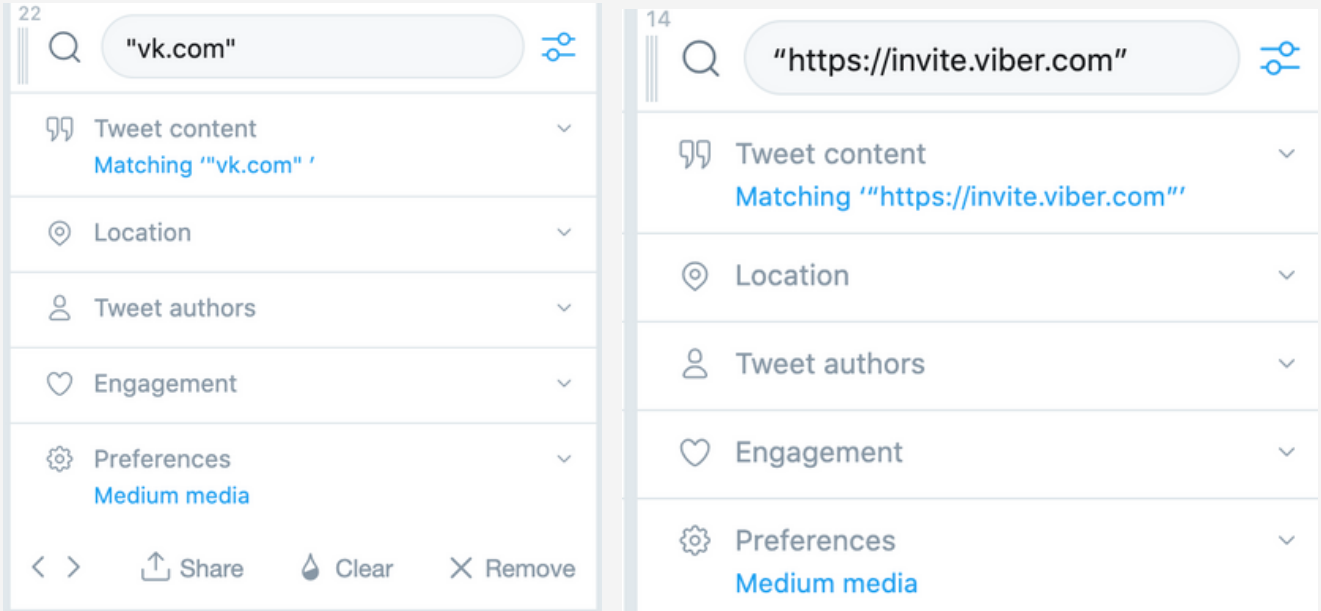

Crowdtangle Link Checker allows you to find out who shared an article on Facebook, Instagram, Reddit or Twitter.

https://chrome.google.com/webstore/detail/crowdtangle-link-checker/klakndphagmmfkpelfkgjbkimjihpmkh?hl=en

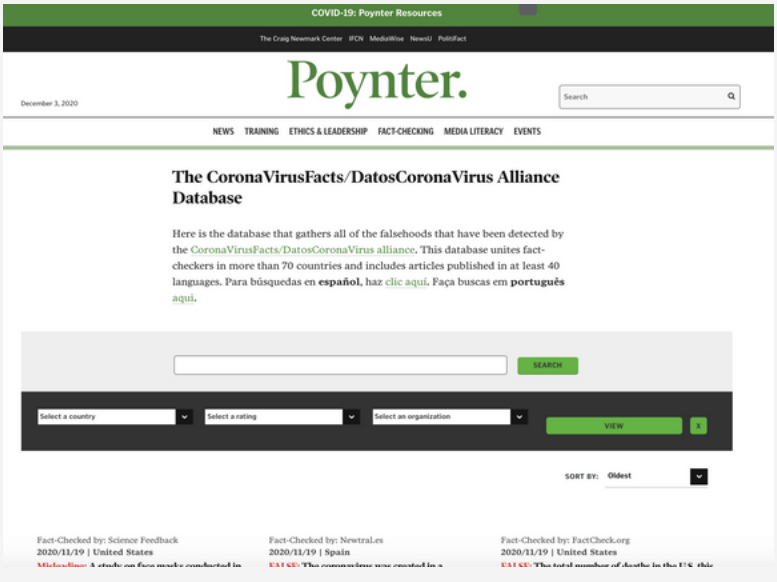

# 5. FIND MESSENGER-GROUPS THROUGH TWITTER SEARCH

# USEFUL WEB PAGES

## 1. COVID-19 FACTCHECK ARCHIVE

The Poynter Institute's database summarizes fact-checks from journalists in 70 countries during the Corona pandemic. You can search the database by keyword.

**https://www.poynter.org/ifcn-covid-19-misinformation/**

## 2. MAPILLARY

Crowdsourced map service, especially helpful in rural areas and the Global South.

https://www.mapillary.com/
